

Evidence-Based Growth Plan for Cohort 11

Prepared for the Zion Tech Hub marketing lead | Based on Cohort 9 and Cohort 10 registration exports

Executive recommendation

Put the majority of the first paid budget into X/Twitter, targeting students, graduates, technology professionals and early-career people interested in data. Lead with Data Science and ML. Use LinkedIn for a professional test, WhatsApp as the referral and conversion layer, and keep Facebook/Instagram to small controlled experiments.

Channel	Budget	Role
X/Twitter	60%	Primary acquisition
LinkedIn	20%	Professional/corporate test
WhatsApp	10%	Nurture, referrals, click-to-chat
Facebook/Instagram	5%	Small creative test
Optimization reserve	5%	Move toward winners

Evidence at a glance

Registration rows	1,147	171
Date range	6 Nov 2025 - 4 Feb 2026	6 May - 4 Jun 2026
Top channel	X/Twitter: 62.6%	X/Twitter: 86.5%
Top course	Data Science and AI: 45.6%	Data Science and ML: 42.1%
Duplicate emails	251	12

1. Where should ad budget go, and on whom?

Channel performance

X/Twitter is the strongest observable acquisition signal: 718 raw registrations in Cohort 9 and 148 in Cohort 10. After normalizing duplicate emails, it still contributed 61.0% of Cohort 9 unique records and 86.2% of Cohort 10 unique records. On the Cohort 10 peak days, 81 of 84 registrations on 14 May and 40 of 42 on 15 May reported X/Twitter.

LinkedIn produced 173 Cohort 9 and 12 Cohort 10 registrations. Its share declined, but it remains strategically relevant for analysts, technology workers, finance professionals and corporate training leads. WhatsApp produced 210 Cohort 9 registrations but only 5 in Cohort 10, so it should be treated as a nurture and referral layer rather than the main cold-acquisition channel.

Who to target

- Primary: students, graduates, early-career professionals and technology workers. Data Science and ML represented 72 Cohort 10 registrations, or 42.1%.
- Secondary: analytics/data, technology/engineering and finance/banking professionals. Use separate messages for Financial Analytics, AI Automation and Supply Chain Analytics.
- Growth audiences: healthcare professionals, educators, business owners, entrepreneurs and supply-chain/operations professionals. These groups are currently smaller and need industry-specific outcomes.

Data Science and ML	72	42.1%
Sales and Marketing Analytics	34	19.9%
Healthcare Data Analytics	27	15.8%
Financial Analytics	21	12.3%
Supply Chain Analytics	11	6.4%
AI Automation	6	3.5%

2. Timing and campaign design

Registration is highly concentrated around deadline or campaign-event spikes. Cohort 10 recorded 84 registrations on 14 May and 42 on 15 May, representing approximately 74% of the cohort. Thursday and Friday accounted for 149 of 171 records. Cohort 9 also had major spikes on 22 and 23 January, with 279 and 190 registrations.

- Start awareness and lead collection 7-10 days before the deadline.
- Increase spend from Tuesday onward, with the largest daily budget on Thursday and Friday.
- Use deadline, countdown and last-48-hours messages, backed by genuine capacity or early-bird limits.
- Use WhatsApp reminders on Thursday evening and Friday morning.

3. Actions to take next week

- Create separate landing pages and adverts for Data Science and ML, Sales and Marketing Analytics, Healthcare Data Analytics, Financial Analytics, Supply Chain Analytics and AI Automation.
- Add UTM source, medium, campaign and creative fields to every campaign link. Track registration completion and payment completion, not just form submissions.
- Launch a referral loop: each registrant receives a referral link or code and a clear benefit for bringing another learner.
- Build a WhatsApp conversion flow for questions, reminders, deadline alerts and referral sharing.
- Use testimonials and project outcomes from previous cohorts as the main creative proof.

4. Data limitations

- These files contain registrations, not impressions, clicks, spend or paid conversion status. Channel share is not the same as advertising conversion rate.
- Occupation is missing from Cohort 9, so occupation targeting evidence is primarily from Cohort 10.
- Amount Paid is completely blank in Cohort 9.
- Duplicate emails are present, especially in Cohort 9. Results should be reported using normalized unique contacts.
- Channel, country and course labels contain inconsistent spelling and formatting.

Decision

Approve a first test budget weighted 60% to X/Twitter and 20% to LinkedIn, with WhatsApp used to nurture and convert. Lead with Data Science and ML for students, graduates and technology-oriented early-career audiences. Launch 7-10 days before the deadline and concentrate spend on Thursday and Friday. Move budget after the first week based on tracked registrations and completed payments.
